| Cause of death in adult PD patients | 147 |

Introduction

This chapter describes the population of adult patients with end-stage kidney disease (ESKD) who were receiving regular peritoneal dialysis (PD) in the UK at the end of 2021 (figure 6.1). This population comprises patients who were on PD at the end of 2020 and remained on PD throughout 2021, as well as patients who commenced/re-commenced PD in 2021. This latter group includes both incident kidney replacement therapy (KRT) patients who ended 2021 on PD and prevalent KRT patients who switched to PD from in-centre haemodialysis (ICHD), home haemodialysis (HHD) or a transplant (Tx) in 2021. Consequently, the cohort of patients receiving PD in a centre not only reflects differences in underlying population case-mix, but also differences in the rates of acceptance onto KRT, survival on PD, transplantation and haemodialysis (ICHD and HHD), and the care of patients on those other modalities, as described in other chapters of this report.

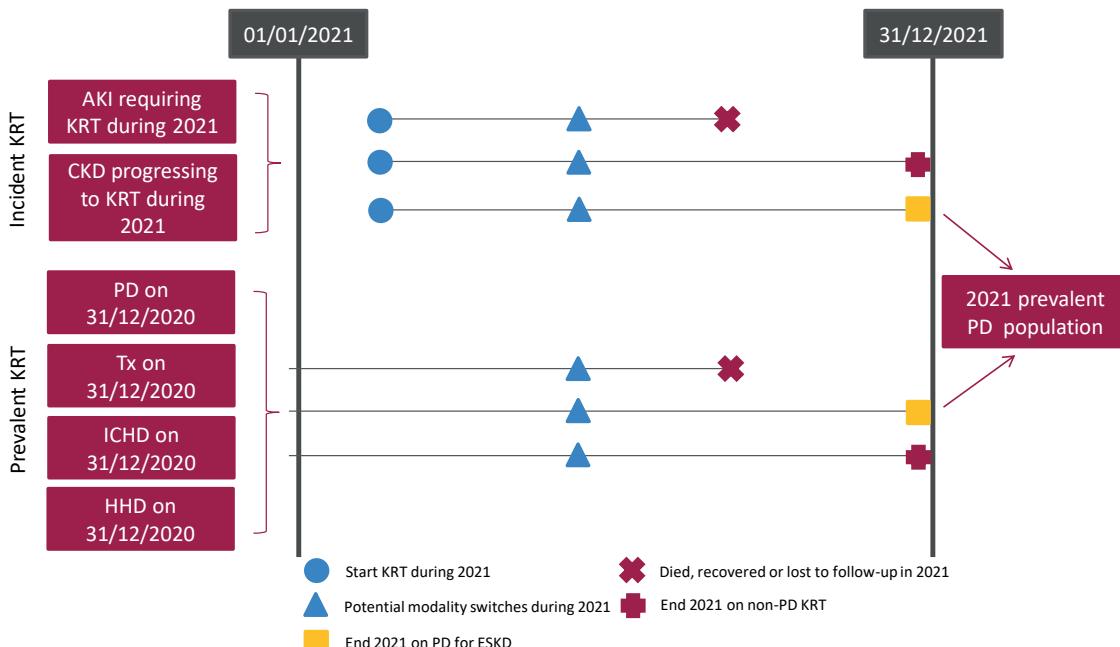

Figure 6.1 Pathways adult patients could follow to be included in the UK 2021 prevalent PD population

Note that patients receiving dialysis for acute kidney injury (AKI) are only included in this chapter if they had a timeline or KRT modality code for chronic PD at the end of 2021 or if they had been on KRT for ≥ 90 days and were on PD at the end of 2021
CKD – chronic kidney disease

The cause of death analyses were undertaken on historic prevalent cohorts to allow sufficient follow-up time.

This chapter addresses the following key aspects of the care of patients on PD for which there are UK Kidney Association guidelines (table 6.1):

- **Complications associated with ESKD and PD:** these include anaemia, mineral bone disorders and metabolic acidosis.
- **Infections associated with PD:** rates of PD peritonitis are reported in this chapter. The four infections subject to mandatory reporting to the UK Health Security Agency (UKHSA) methicillin-resistant *Staphylococcus aureus* (MRSA), methicillin-sensitive *Staphylococcus aureus* (MSSA), *Escherichia coli* bacteraemia and *Clostridium difficile* - will be added to our website alongside the annual report when 2021 data are available.

Rationale for analyses

The analyses begin with a description of the 2021 prevalent adult PD population, including the number on PD per million population (pmp).

The UK Kidney Association guidelines ([ukkidney.org/health-professionals/guidelines/guidelines-commentaries](https://www.ukkidney.org/health-professionals/guidelines/guidelines-commentaries)) provide audit measures relevant to the care of patients on PD and, where data permit, their attainment by UK kidney centres in 2021 is reported in this chapter (table 6.1). Audit measures in guidelines that have been archived are not included.

Some audit measures – for example, the target for glycated haemoglobin (HbA1c) in those on hypoglycaemia-inducing treatment – cannot be reported because the completeness of the required data items is too low. Detail about the completeness of data returned to the UK Renal Registry (UKRR) is available through the UKRR data portal ([ukkidney.org/audit-research/data-portals](https://www.ukkidney.org/audit-research/data-portals)). Audit measures that cannot be reported because the required data items were not collected by the UKRR are omitted.

For definitions and methods relating to this chapter see appendix A. Centres were excluded from caterpillar plots and cells were blanked in tables where data completeness for a biochemical variable was <70% and/or the number of patients reported was <10. The number preceding the centre name in each caterpillar plot indicates the percentage of missing data for that centre.

As Colchester kidney centre did not have any PD patients they were excluded from some of the analyses, although their dialysis patients were included in the relevant dialysis population denominators.

Exeter was unable to submit patient level data for 2021. Aggregate numbers by modality were provided, enabling inclusion in Tables 6.2 and 6.3. Exeter is excluded from all other analyses.

Table 6.1 The UK Kidney Association audit measures relevant to PD that are reported in this chapter

| The UK Kidney Association guideline | Audit criteria | Related analysis/analyses |
|---|--|---|
| CKD mineral bone disorder (2018) | Percentage of patients with serum calcium above the normal reference range of 2.2–2.5 mmol/L | Table 6.5, figure 6.3 |
| PD (2017) | Plasma bicarbonate should be maintained in the normal reference range 22–30 mmol/L – 100% | Table 6.5, figure 6.5 |
| Anaemia (2020) | Proportion of patients with serum ferritin <100 µg/L at start of treatment with erythropoiesis stimulating agent (ESA) | Table 6.6, figure 6.9 (the UKRR does not hold treatment with ESA start dates) |
| Planning, initiating and withdrawing KRT (2014) | Number of patients withdrawing from PD as a proportion of all deaths on PD | Table 6.8, figure 6.13 |

ESA – erythropoiesis stimulating agent

PD

Key findings

- 3,903 adult patients were receiving PD for ESKD in the UK on 31/12/2021, compared to 3822 in 2020, which represented 5.6% of the KRT population.
- The median age of PD patients was 63.3 years and 60.3% were male.
- The median adjusted calcium for PD patients was 2.4 mmol/L and 14.3% were above the target range of 2.2–2.5 mmol/L.
- The median bicarbonate for PD patients was 24 mmol/L and 74.1% were within the target range of 22–30 mmol/L.
- The median haemoglobin for PD patients was 111 g/L and 8.8% had a ferritin <100 µg/L.
- The PD peritonitis rate in 2021 (England only) was 0.42/1 PD patient-year.
- There was no cause of death data available for 37.0% of deaths. For those with data, the leading cause of death was infection in both younger patients and those ≥65 years at 40.0% and 26.2% respectively with a likely contribution from COVID related deaths. Treatment withdrawal accounted for 11.0% of deaths in those ≥65 years.

PD

Analyses

Changes to the prevalent adult PD population

For the 68 adult kidney centres, the number of prevalent patients on PD was calculated as both a proportion of the prevalent patients on KRT and as a proportion of the estimated centre catchment population (calculated as detailed in appendix A).

Table 6.2 Number of prevalent adult PD patients and proportion of adult KRT patients on PD by year and by centre; number of PD patients as a proportion of the catchment population

| Centre | N on PD | | | | | % on PD | | | | | Estimated catchment population (millions) | 2021 crude rate (pmp) |

Country PD populations were calculated by summing the PD patients from centres in each country. Estimated country populations were derived from Office for National Statistics figures (see appendix A for details on estimated catchment population by kidney centre)

Exeter was unable to submit 2021 patient level data, but provided aggregate numbers of patients on KRT at the end of 2021, by treatment modality

pmp – per million population

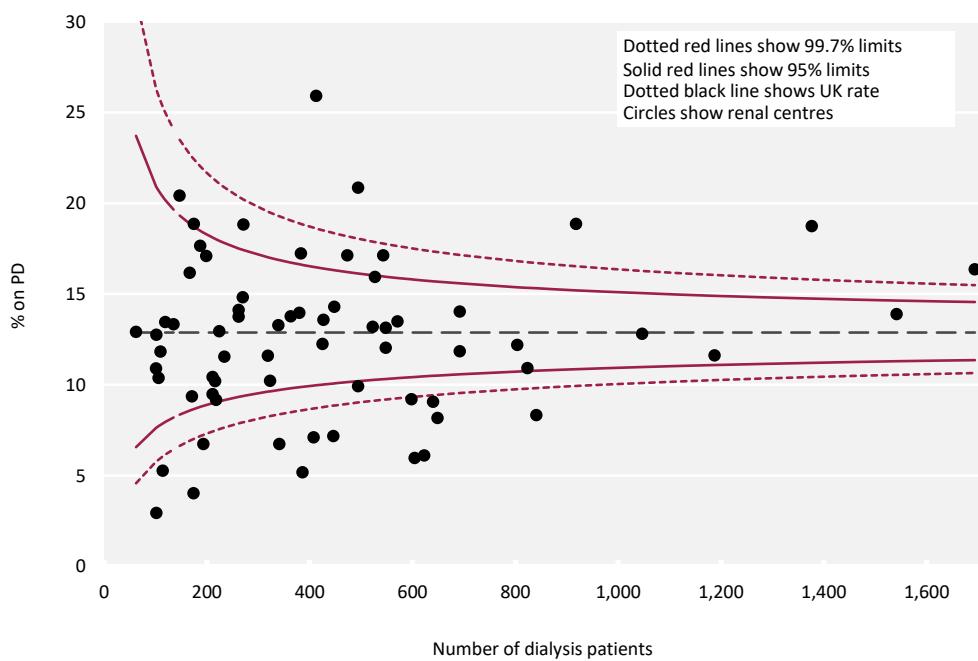

Figure 6.2 Percentage of adult patients prevalent to dialysis on 31/12/2021 who were on PD by centre

PD

Demographics of prevalent adult PD patients

The proportion of PD patients from each ethnic group is shown for patients with ethnicity data – the proportion of patients in each centre with no ethnicity data is shown separately.

Blank cells – no data returned by the centre or data completeness <70%

Breakdown by ethnicity is not shown for centres with <70% data completeness, but these centres were included in national averages

Exeter was unable to submit 2021 patient level data, but provided aggregate numbers of patients on KRT at the end of 2021, by treatment modality

Primary renal diseases (PRDs) were grouped into categories as shown in table 6.4, with the mapping of disease codes into groups explained in more detail in appendix A. The proportion of PD patients with each PRD is shown for patients with PRD data and these total 100% of patients with data. The proportion of patients with no PRD data is shown on a separate line.

Table 6.4 Primary renal diseases (PRDs) of adult patients prevalent to PD on 31/12/2021

| PRD | N on PD | % PD population | Age <65 yrs | | Age ≥65 yrs | | M/F ratio |

Biochemistry parameters in prevalent adult PD patients

The UK Kidney Association guideline on CKD mineral bone disease contains only one audit measure, which is the percentage of patients with adjusted calcium above the target range. The UK Kidney Association guideline on PD contains one biochemical audit measure, which is the proportion of patients with bicarbonate in the target range.

Table 6.5 Median adjusted calcium (Ca) and percentage with adjusted Ca within and above the target range (2.2–2.5 mmol/L); and median bicarbonate and percentage with bicarbonate below, within and above the target range (22–30 mmol/L) in adult patients prevalent to PD on 31/12/2021 by centre

| Adjusted calcium | | | | Bicarbonate | | | | | |

PD peritonitis infection rates are collected for English kidney centres by the UKRR in collaboration with NHS England for the Renal Dialysis Quality Dashboard (ukkidney.org/audit-research/data-permissions/data/ukrr-nhs-england-quality-dashboard-dataset) and are listed in the table below. The funnel plot (figure 6.12) shows each centre's 2021 peritonitis rate per one PD patient-year against the number of patient-years at risk to take into account the greater variation expected as centre size decreases.

Table 6.7 Number of patient-years and peritonitis rate in adult patients receiving PD in 2021 by centre in England

Please visit the UKRR data portal (ukkidney.org/audit-research/data-portals) to identify individual kidney centres

Cause of death in adult PD patients

Cause of death was analysed in prevalent patients receiving PD on 31/12/2020 and followed-up for one year in 2021. The proportion of PD patients with each cause of death is shown for patients with cause of death data and these total 100% of patients with data. The proportion of patients with no cause of death data is shown on a separate line. Further detail on the survival of prevalent KRT patients is in chapter 3.

Table 6.8 Cause of death in adult patients prevalent to PD on 31/12/2020 followed-up in 2021 by age group

| Cause of death | PD all ages | | PD < 65 years | | PD ≥ 65 years | |
|--------------------------|-------------|--------------|---------------|--------------|---------------|--------------|
| | N | % | N | % | N | % |
| Cardiac disease | 64 | 21.3 | 21 | 23.3 | 43 | 20.5 |
