External companies  
Home HD trainers  
Managers  
Estates and housing board  
Carers  
Access Team  
Psychologists  
Wider renal staff  
Trainees  
Other teams and organisations who have done or are interested in home therapies

## Shared

Sharing the benefits of home dialysis  
  
We want to change the view that In-centre HD is the status quo

## Purpose

We are not getting across the benefits and simplicity of home dialysis therapies currently.  
Acute dialysis does not have to be HD – what about PD?  
It is cheaper – but trusts don't see this financial benefit  
Positive patient experiences can promote home therapies  
To improve relationship and communication with contractors  
We know home dialysis works - we need to encourage some more people to manage own lives and activities - and to see the benefits this can bring.  
There is variation between trusts - we want to get rid of post-code care (e.g. different reimbursement policies, access to assisted therapies)  
It improves patient outcomes  
Knowing the end target helps - focus on the gains that can be made and goals  
The risks can scare people - this can put people off - but we know people can overcome them and see huge benefits
