Shared HD Care summary roadmap

Look at the detailed roadmap on the shared care website under key documents at: www.shareddialysis-care.org.uk/resources

1. Set up	2. Test with patients	3. Maintain and grow	4. Sustain and rejuvenate	5. Standard practice
Is your unit ready to start by establishing awareness of shared care and gauging interest, energy and motivation from patients and staff? **Check:** **Are you clear that shared care is about involving your patients more and not driving them to do self care?**	Are you Initiating and testing new ideas to establish how best to offer shared care and to support patients' choices? **Check:** **Do you have all your staff on board or is there work to be done at this level?**	Have you started shared care and now need to keep the momentum going and to improve? **Check:** **Is it clear to new patients that shared care is available and easy to access?**	Is your unit maintaining the new practice and putting into place the standards to make it a robust routine? Do you actively look for new opportunities for patients to learn? **Check:** **If your champions left, would SHC still continue? Do you have methods of rejuvenation in place?**	This is the culture now. Inclusive and supportive of all patients' choices. The whole team are participating, and the documentation supports shared care. **Check:** **Are you sharing your practice to inspire others and working on how to develop patients in co - production such as peer supporter?**

Reflect with members of your team about which particular stage your unit is at and why?
